laRhea goes pro

The new line of professional machines

The Rhea Vendors Group has teamed up with Astoria & Wega to create a partnership for the production and distribution of professional and automatic coffee machines.

With more than a century of combined experience, both companies are known for our premium positioning and shared philosophy of quality, vision, and Italian style.

We are proud to present three new machines born of this exciting new collaboration, each one a testament to the excellence and ingenuity of the partner companies.

Welcome to our new line, "laRhea Professionale".

URBAN

Contemporary lines, cutting-edge technology, and an exceptional versatility that enables professional baristas to adapt to constantly evolving consumer trends.

POLARIS

A fully electronic coffee machine with an impressive range of programmable features that make a busy barista's life a whole lot easier.

MININOVA

Combining hi-tech performance with a vintage soul, this little gem is equally suited to both a professional and a home setting.

URBAN

designed with baristas in mind

URBAN is our response to the demands of a complex, constantly evolving market in which macro-trends and individual preference carry equal weight.

Our R&D team worked together with professional baristas from around the world to design a machine that offers the kind of versatility that today's consumers expect.

URBAN takes its name and distinctive form from iconic examples of green urban design like the eco-city of Jakriborg in Sweden, characterized by clean, dynamic lines and intelligently integrated functions. URBAN is green, thanks to advanced technical features like Wega Power Regulation, Power Steam, and Power Boost, which guarantee energy savings of 47.6% in standby mode and up to 30% in operation.

URBAN enables baristas to explore their own creativity, and to give customers not only what they want today, but what they'll want tomorrow.

POLARIS

sexy outside, smart inside

With its backlit keypad system, sophisticated lines, and unique play of LEDs on the side panels, POLARIS challenges the standard of automated coffee machines by making it clear from first glance that advanced technology can be tastefully combined with aesthetic allure.

POLARIS knows that baristas need all the help they can get, which is why we designed it to make their lives as easy as possible, from the intuitive touchscreen interface to a wide range of programmable features like electronic dosing (4 per group), scheduled automatic self-cleaning cycle, daily power on/off, water softener replacement alarm, and an optional auto-steamer, to name just a few.

POLARIS is an electronic coffee machine that has it all – beauty, brains, and personality. Enough to make any busy barista fall in love.

MININOVA

Born to be naked

MININOVA, the smallest of the three new models, is a single-group machine that fits in virtually anywhere. The aesthetic simplicity of the exterior, stripped bare of digital bells and whistles, is accentuated by retro-style details like the natural wood finishes on the valve knobs, filter handle and levers.

This vintage attitude extends to its largely manual functions which combine simple, reliable operation and performance with a look that evokes the 'steampunk' charm of the dawn of the Industrial Age.

The machine also features a direct connection to the water main, an inlet water pressure regulator, a 2-liter boiler with two exchangers, a hot water spigot and a built-in descaler that removes limescale with one simple action.

MININOVA: a conveniently sized conversation piece that also happens to make a great cup of coffee.
